

Java

```
class Solution {  
    public int totalWaviness(int num1, int num2) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number} num1  
 * @param {number} num2  
 * @return {number}  
 */  
var totalWaviness = function(num1, num2) {  
  
};
```

TypeScript

```
function totalWaviness(num1: number, num2: number): number {  
  
};
```

C++

```
class Solution {
```

```
public:
    int totalWaviness(int num1, int num2) {

    }
};
```

C#

```
public class Solution {
    public int TotalWaviness(int num1, int num2) {

    }
}
```

Kotlin

```
class Solution {
    fun totalWaviness(num1: Int, num2: Int): Int {

    }
}
```

Go

```
func totalWaviness(num1 int, num2 int) int {

}
```
